

UBN started a Climate Detectives Project in northern Germany.

12 pilot schools are going to teach climate and energy issues, to check their carbon dioxide emissions, to assess the data, to set up a climate protection plan and to realize climate protection measures. These activities are based upon our approach and material (see <http://www.umweltschulen.de/klima/climatedetectives.html>).

The project started with a solar cooking action in the primary school "Juri Gagarin", Stralsund.
